**Recalling Natural Deduction Rules** 

in First Order Logic

#### Which are the new rules (on top of Propositional Logic)?

#### Elimination rule for $\forall$

If we know that  $\forall x, \varphi$  holds, then we can conclude that  $\varphi$  holds for a specific term t

$$\frac{\forall x \, \varphi}{\varphi[t/x]} \, \forall \mathbf{E}$$

#### Introduction rule for $\forall$

If we assume some term t and we are able to prove that  $\varphi[t/x]$  then we can conclude that  $\forall x, \varphi$ .

$$egin{array}{c} [t] & dots \ rac{arphi[t/x]}{orall x\,arphi[t/x]}\,orall \mathbf{I} \end{array}$$

#### Which are the new rules (on top of Propositional Logic)?

#### Elimination rule for $\exists$

If we know that  $\exists x, \varphi$  holds, and if assuming term t and  $\varphi[t/x]$  we can deduce  $\psi$ , then we can prove  $\psi$  overall.

$$\begin{array}{ccc} & & [t & \varphi[t/x]] \\ & & \vdots \\ & & \psi \end{array} \exists \mathbf{E}$$

#### Introduction rule for ∃

If we assume some term t and we are able to prove that  $\varphi[t/x]$  then we can conclude that  $\forall x, \varphi$ .

$$\frac{\varphi[t/x]}{\exists x, \varphi}$$
  $\exists I$ 

#### Which are the new rules (on top of Propositional Logic)?

#### Elimination rule for =

If we know that two terms  $t_1$  and  $t_2$  are equal and that  $\varphi[t_1/x]$  holds, then  $\varphi[t_1/x]$  must also hold.

$$\frac{t_1=t_2}{\varphi[t_2/x]} = \mathbf{E}$$

#### Introduction rule for =

If we assume some term t and we are able to prove that  $\varphi[t/x]$  then we can conclude that  $\forall x, \varphi$ .

$$\overline{t=t}=$$
